- Assignment 2
- $\beta$  - probability

### Question 8

$$N = 200$$

$$p = 0.10$$

"approximate"

Poisson

Normal

$$p < \text{"small"}$$

$$?$$

$$p \sim 0.5$$

$$N \rightarrow \text{large}$$

$$\lambda = N \cdot p$$

a) "X is at most 30"

$$0, \dots, 30$$

---

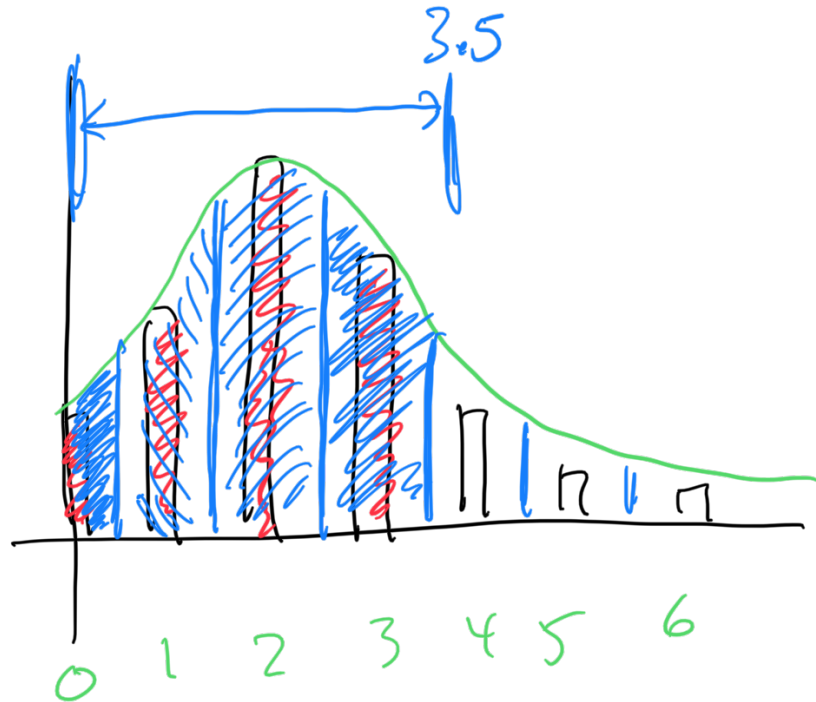

Binomial  $\rightarrow$  Discrete

$$0, 1, 2, \dots$$

$$\text{cdf}(30)$$

$$[0, \dots, 30]$$

Poisson / Normal  $\rightarrow$  Continues.

$cdf(3)$

Binomial  
 $cdf(30)$

Poisson  
 $cdf(30.5)$

---

---

B-probability

mean uncertainty  $(z, \alpha)$

No problem

Unlucky

$$\alpha = 0.05 \rightarrow 95\% \text{ CL}$$

1

truth  $\rightarrow \mu = 90$

possible  $\rightarrow \bar{x} = 100$

$$\frac{\sigma}{\sqrt{N}} \rightarrow \text{SEM}$$

$$Z = \frac{x - \mu}{\sigma/\sqrt{n}} = \frac{x - \mu}{SEM}$$

$$\bar{x} = \mu + Z \cdot SEM$$

$$\beta(\mu_{true})$$

P... . hypotheses not on

Exam
